What is the benefit of wearing home made masks?

Sources with information on this topic:
BMJ, JAMA, NEJM, PHAC, WHO, CDC, Australia.
(NL, ON and CADTH all had links to the previously mentioned sources)

Consistency:
- Evidence is not consistent on recommendations for healthy individuals wearing masks
- High consistency in masks not being enough alone, and must be part of a routine that includes social distancing, hand washing, cough/sneeze etiquette and cleaning frequently touched surfaces
- High consistency in the importance of properly donning/doffing masks

Credibility:
- Recommendations for cloth masks based on circumstantial evidence/expert opinion

Summary:
- No specific evidence that masks in healthy individuals reduce transmission of COVID or other viruses.
- Current recommendations to use cloth masks are based on mounting evidence that COVID can be transmitted by asymptomatic or pre-symptomatic carriers of the virus.
- Cloth mask use may be reasonable, particularly in areas where social distancing is difficult to maintain (e.g. grocery stores) and in communities with high transmission
